- Astotin Lake

Notes:

- 1) The flood maps were created using a two-dimensional hydrodynamic HEC-RAS model and a Digital Elevation Model (DEM) of the Astotin Creek Watershed
- 2) The DEM was created by combining the 2018 LiDAR data collected by Airborne Imaging with the bathymetric data collected by WSP in 2021.
- 3) The HEC-RAS model was calibrated for low-flow conditions but no calibration data for high flood events were available, limiting the model's accuracy at high flows.
- 4) The flood maps do not consider blockage of bridges and culverts that may develop during large flood events.
- 5) The flood maps only consider flooding due to Astotin Creek flows and do not include local impoundments due to flooding issues.
